Emergency medical assistance and home care and treatment of the PHI Healthcare Center Tetovo. The emergency medical assistance and home care and treatment of the PHI Healthcare Center Tetovo provides medical assistance to the citizens of Tetovo and the surrounding, where more than 220.000 citizens live. The Ambulance employees are highly qualified professionals and they are prepared anytime and anywhere to provide emergency medical assistance to the injured and sick people who use healthcare services on the territory of the city of Tetovo and the surrounding. A priority above all things to our Ambulance employees is the health of our users of healthcare services and their quick recovery. We hope that in the future we will continue our professional operation and we will be leaders in the region in the provision of emergency medical assistance, which would be to the credit of our employees who work in the Emergency medical assistance and home care and treatment.

Biochemical-laboratory activity

Making a correct diagnosis at every medical examination depends on the accuracy of the laboratorial findings. With a highly sophisticated biochemical laboratory and dedicated staff, the Healthcare Center Tetovo provides accuracy and expediency to each of our patients during the performance of the laboratory analyses. We are continuously dedicated to the insurance of some of the highest quality reagents, necessary for the quality of the analyses which we perform. Our motive for the everyday work and the development of the biochemical laboratory is the interest of the patient and the honesty in the work, always making sure to provide quality, timely and dignified medical assistance.

Stomatological healthcare of children up to 14 years of age

The employees who work in the Stomatological healthcare of children up to 14 years of age are highly qualified professionals.

The activity that they perform every day with patients up to 14 years of age includes the following:

- ♦ Diagnostics of the risk for development of caries and paradontopathy,
- ♦ Early detection of diseases of the mouth and teeth,
- ♦ Detection of deformities and anomalies in the development of teeth and jaws in children up to 14 years of age.
- ♦ Check-up and recording of the condition of the denture (milk teeth, permanent teeth, caries, extraction and seal index)
- ♦ Compulsory examination of all students in primary and secondary education
- ♦ Regular check-ups of the health condition of the mouth and the teeth by conducting general medical examinations in accordance with the National strategy for prevention of oral diseases and the Government Program.
- ♦ Recording of the established condition in a health record and a record book
- ♦ Education of the students on the adoption of a healthy lifestyle, early detection of health problems and referral to a timely treatment.

Through our tireless commitment, education, attention and respect for each of our patients, every day we justify the trust of our patients. The PHI Healthcare Center Tetovo will stay dedicated in the future and will take care of health in the interest of the patient and the honesty of work, always making sure to provide quality, timely and dignified medical assistance.
