

PHI HEALTHCARE CENTER KUMANOVO

Director: Mr. Adrijan Afuzi
Bachelor of Economics

Mr. Adrijan Afuzi was born in 1973 in Kumanovo where he finished primary school. He finished secondary school in Preshevo. He continued his education at the Faculty of Economics within the State University in Tetovo, where after the graduation he acquired the title Bachelor of Economics. In 2007 he was employed in the PE "Cleanliness and Greenery", and from 2013 until 2017 he performed the function Assistant Director in this public enterprise. Since 2017 he has been appointed Director of the PHI Healthcare Center Kumanovo. Mr. Adrijan Afuzi is a family man and a father of three children.

THE PHI HEALTHCARE CENTER KUMANOVO is a public healthcare institution which provides healthcare services on the area of the Municipalities of Kumanovo with 107.745 residents, Lipkovo with 29.346 residents and Staro Nagorichane with 4.268 residents. The Healthcare Center provides emergency medical assistance with home care and treatment, emergency stomatological assistance, preventive healthcare for preschool and school-age children, polyvalent patronage, stomatological healthcare for children up to 14 years of age and x-ray diagnostics, as well as primary healthcare in rural areas with the project Rural Doctor which covers 19 villages. The Healthcare Center is also responsible for the procurement of medications. It conducts specialist-consultative healthcare in the field of occupational medicine and biochemical-laboratory activity. The Healthcare Center performs primary healthcare for the needs of the convicted and imprisoned persons accommodated in the penal-correctional institution Prison Kumanovo with an open department in Kriva Palanka, village K'shanje. The emergency medical assistance service with a staff that comprises of teams (a doctor, a nurse and a driver), and equipped with sanitary vehicles with complete medical equipment, a vehicle for transport of patients, passenger vehicle for lying positions, light vehicles and terrain vehicles, timely and with a quality provides 24 hour medical assistance for the emergency interventions of the entire region covered by the Healthcare Center. The service also includes home care and treatment wherewith medical assistance is provided to patients at their homes, as well as a service on duty.

The healthcare center also disposes of light and terrain vehicles which are being used for the needs of all services. The service for emergency stomatological assistance performs the stomatological services of an urgent nature. General medical examinations of teeth are performed in the field of preventive stomatology in children from primary and secondary schools, children with special needs, and students from the private faculty in Kumanovo. Within the national strategy for the preservation of oral health in children up to 14 years of age, sealing of fissures in permanent teeth is performed. There is also an x-ray diagnostics as a part of the service for stomatological healthcare. The preventive healthcare of preschool and school-age children is performed in an outpatient clinic, on the ground in schools, in a children's dispensary and in a school dispensary.

According to the immunization calendar provided by the Ministry of Health, regular vaccination of preschool and school-age children is performed, as well as their regular general medical examinations, and general medical examinations of children with a disability. Professional and quality preventive healthcare of the population from all age categories is provided by the polyvalent patronage service. The work is performed according to a program for active healthcare of mothers and children in the Republic of Macedonia and programs and projects of the Ministry of Health such as a Program for Early Detection of Malignant Diseases in the Republic of Macedonia, Program for Compulsory Immunization of the Population of the Republic of Macedonia, Health for Everyone, Home Visiting, etc. The specialist-consultative healthcare is conducted in the field of occupational medicine and biochemical-laboratory activity. The field of occupational medicine includes performance of specialist-consultative examinations in My Term, Doppler of upper extremities, Doppler of lower extremities, spirometry, and other examinations. In addition, examinations for the preparation of medical certificates are performed, periodic general medical examinations and targeted examinations for assessment of the health condition and the work ability of the workers. The laboratory activity is performed in the Healthcare Center, and since recently it is also performed in an adjusted space equipped with new equipment and apparatuses in a school dispensary. All hematological-biochemical analyses of the basic package and the specialist package are performed in both laboratories, as well as immunologic tests, allergies, thyroid and reproductive hormones, blood groups, oral glucose tolerance test (OGTT), glycated haemoglobin (HbA1c), tumor markers (carcinoembryonic antigen (CEA), cancer antigen 19-9 (CA 19-9), cancer antigen 15-3 (CA 15-3), cancer antigen 125 (CA-125). The medical staff attends at seminars, workshops, and educations in the country and abroad, in order to complement their knowledge and to provide quality services to the users.
