

PHI HEALTHCARE CENTER NEGOTINO

Director: Dr. Biljana Filipova

Dr. Biljana Filipova was born in 1961 in Negotino, where she finished primary and secondary education. She continued her higher education at the Faculty of Medicine in Skopje within the University Ss. Cyril and Methodius. After she completed her studies, she was employed in the healthcare center in Negotino in 1987, as a general practitioner in the service for emergency medical assistance and home treatment. She started her specialization in physical medicine and rehabilitation in 1996 at the Faculty of Medicine in Skopje, she completed it successfully in 1999, and since then she has been working as a doctor – specialist at the Department of Physical Medicine and Rehabilitation within the PHI Healthcare Center Negotino. Throughout her work she actively participates in many congresses and seminars, as well as in numerous associations of doctors. In 2017 she was reappointed Director of the PHI Healthcare Center Negotino.

The very beginnings of the PHI Healthcare Center Negotino date back to 1957. It provides healthcare to a population of 27.000 residents in two municipalities, Negotino and Demir Kapija, and it has a good geostrategic position – located directly by an international highway.

The following units operate within the Healthcare Center:

- ◆ Department of emergency medical assistance and home treatment
- ◆ Department of physical medicine and rehabilitation
- ◆ Department of psychiatry
- ◆ Department of ophthalmology
- ◆ Department of dermatovenereology
- ◆ Department of otorhinolaryngology
- ◆ Department of internal medicine
- ◆ Radiography cabinet
- ◆ Biochemical laboratory
- ◆ Preventive pediatric healthcare with vaccinations for preschool and school-age children
- ◆ Preventive pediatric stomatology
- ◆ Polyvalent patronage service

Currently there are ongoing preparations to open a Department of Neurology.

The PHI Healthcare Center Negotino continuously strives to expand its activities and it invests in the education and professional improvement of the medical staff through specializations and continuous medical education. There are great opportunities in terms of space and staff, however that requires new equipment. We would mention: the mammograph, the ultrasound machine, etc.
